Experience

ZilMoney | Manjeri, India - Full-time
Software Tester | 04/2026 - Present
- Test web application features end-to-end using STLC practices, including understanding requirements, designing test cases, executing test scenarios, identifying defects, and reporting issues.
- Perform functional and regression testing across application workflows and verify bug fixes before release.
- Validate releases and work with development/product workflows to reproduce issues, communicate defects clearly, and confirm fixes.
- Build practical test automation skills with Playwright and TypeScript by applying automation to real application scenarios.

Altos Technologies | Kochi, India - Full-time
Python Full Stack Developer | 09/2025 - 04/2026
- Assisted in developing and deploying an accounting management system using Python and Django, contributing to features from development through release.
- Worked with Django ORM, MySQL, JavaScript, HTML, CSS, Bootstrap and AJAX in database-backed web application workflows.
- Fixed defects and optimized existing features on a live production application, improving application reliability for end users.
- Collaborated with the development workflow to understand requirements, implement changes, troubleshoot issues, and support releases.

Revertech IT Solutions | Kochi, India - Training
Graduate Trainee | 05/2023
- Completed an industry training program covering Python and Machine Learning.
- Built a housing price prediction model using real Bengaluru housing datasets as part of the training.

Projects

Hospital Management Application | - Project
Full Stack Developer |
- Built a Django-based hospital management application with separate patient, doctor, and admin workflows and role-based authentication.
- Implemented appointment booking with time-slot management, appointment history, profile updates, and database-backed workflows using Django ORM and MySQL.
- Added email notifications for registration and appointment confirmations and used AJAX for dynamic web interactions.

Real-Time Landslide Detection and Alerting System | - Project
Machine Learning |
- Focused primarily on the Machine Learning component of a real-time environmental monitoring and alerting system.
- Developed and applied ML models for landslide detection using data collected through a Wireless Sensor Network.
- Integrated the ML-focused detection workflow with the broader web-connected monitoring system; the project received a Best Project Award at an IEEE Symposium (Malabar Subsection).

Smart Dog Repellent System | - Project
Computer Vision |
- Developed a computer-vision-based smart dog repellent system using YOLOv8 for real-time dog/object detection.
- Implemented serial communication to connect the computer-vision detection system with the hardware response mechanism.
- Applied object detection and real-time computer vision concepts to an AI-enabled hardware project.

Skills

Programming: Python, JavaScript, TypeScript, SQL
Web / Backend: Django, Django ORM, HTML5, CSS3, Bootstrap, AJAX, REST/API concepts
Database: MySQL
Testing / Automation: Manual Testing, STLC, Functional Testing, Regression Testing, Test Case Design, Bug Tracking, Defect Reporting, Playwright
AI / ML: Machine Learning, Computer Vision, YOLOv8
Tools: Git, VS Code, Serial Communication

Education

Government Engineering College Palakkad | B.Tech. in Information Technology | 11/2021 - 06/2025 | 7.9 CGPA
